Education

CMR Institute of Technology, Bengaluru – B.E., Computer Science and Engineering *2022–2026* **CGPA: 8.66**

Golden Gate International College, Kathmandu – 12th Science *2021* **CGPA: 8.05**

New Star English Boarding School, Kailali – 10th *2019* **CGPA: 8.5**

Technical Skills

Languages:	Python, C, Java, JavaScript, TypeScript
AI/ML:	PyTorch, Scikit-learn, Hugging Face Transformers, NLP
LLM & RAG:	LangChain, LangGraph, RAG, Retrieval Pipelines, Embeddings, Vector Search, RAG Evaluation
Agentic AI:	MCP, Agent Orchestration, Multi-Agent Systems, Agent Memory, Agent Evaluation, Observability
Web:	React, Next.js, Node.js, Express.js, FastAPI, Tailwind CSS, REST APIs
Databases:	MySQL, SQLite, MongoDB Atlas, Supabase, PostgreSQL, pgvector, Pinecone
Cloud/DevOps:	AWS, Azure, GCP, Docker, Jenkins, CI/CD, Vercel, Render
Tools:	Git, GitHub, VS Code, Jupyter, LangSmith, Langfuse, RAGAS, Presidio, FastEmbed, Prisma, Inngest, Streamlit, OpenRouter, Razorpay

Professional Experience

Palm Mind AI, Lalitpur, Nepal **Jun 2026–Sep 2026**

AI/ML Intern – Document Intelligence and Agentic AI

- Assisted in developing document intelligence workflows, including document preprocessing, data annotation, and validation of AI-based information extraction.
- Contributed to prototyping and testing LLM-based agents for business workflow automation, including HR and procurement processes.
- Assisted in testing AI application integrations, validating model outputs, and debugging backend workflows for document processing and intelligent automation.

SupMentr Technologies Pvt. Ltd., Bengaluru **Feb 2026–May 2026**

Full Stack Web Development Intern – MERN *NASSCOM Future Skills Program*

- Developed **ChatApp**, a full-stack real-time messaging application using the MERN stack and Socket.IO for low-latency client-server communication.
- Implemented JWT authentication, online/offline presence, message delivered/seen status, instant notifications, and user profiles.
- Designed REST APIs and MongoDB/Mongoose models; integrated Cloudinary for image sharing and Multer for file handling, with a React, TypeScript, Vite, and Tailwind CSS frontend.

Projects

AI-Powered Pull Request Reviewer Live Demo | GitHub

Next.js, TypeScript, PostgreSQL, Prisma, Pinecone, Inngest, OpenRouter, GitHub API, Razorpay

- Built a GitHub-integrated AI reviewer that analyzes pull requests and posts contextual comments.
- Implemented repository-aware RAG using file chunking, embeddings, and Pinecone search to retrieve context beyond pull-request diffs.
- Developed asynchronous reviews and repository sync with Inngest; managed application data and sync status using PostgreSQL and Prisma.
- Integrated GitHub OAuth, GitHub App webhooks, and Razorpay subscription/billing webhooks; deployed on Vercel and validated with test repositories and pull requests.

AI-Powered Customer Support Agent Live Demo | GitHub

Python, FastAPI, PostgreSQL, pgvector, LangChain, Groq, Presidio, FastEmbed, Langfuse, Render

- Developed a RAG-based support agent for answering customer queries using an approved knowledge base and PostgreSQL/pgvector retrieval.
- Implemented tool-calling workflows for intent classification, retrieval, confidence-based validation, extractive fallback, and human escalation.
- Added safety guardrails for prompt injection, PII redaction, input/output classification, and policy consistency.
- Built persistent PostgreSQL ticket and conversation workflows with ticket recovery, ownership validation, and idempotent request handling.
- Integrated Langfuse tracing for model calls, retrieval, guardrail decisions, token usage, and response traces; deployed using FastAPI, Render, and Neon PostgreSQL.

Enterprise Agentic RAG – Evaluation Dashboard Live Demo | GitHub

Python, Streamlit, RAGAS, FastAPI, LangGraph

- Built a Streamlit dashboard to inspect ground-truth Q&A datasets, execute live RAG pipeline evaluations, and analyze results.
- Integrated RAGAS metrics and guardrail evaluations to assess answer quality, faithfulness, relevance, and safety behavior.
- Developed a three-stage workflow covering ground-truth review, live pipeline execution, and metric analysis for systematic debugging and quality assessment.

Transformer From Scratch | *Python, PyTorch* GitHub

- Implemented core Transformer components from first principles, including token embeddings, positional encoding, and query, key, and value (QKV) representations.

Achievements & Training

- **Top 6 Finalist** – CTRL+MOVE 24-Hour Hackathon (2025), selected among 105 participating teams.
- Participated in **Code Carnage 24-Hour Hackathon (2025)**.
- Participated in **AI Hiring Show: Vibe Coding, Power Hiring (2025)**.
- **Training:** Advanced Route-Production AI and LLM Engineering: Frontier AI from Research to Production (Krishnaik.in); Node.js, Next.js, and React (chaicode)
